Multi-storey housing development
Porthcawl, Mid Glamorgan

Terrix Brick Slips

Project achieves u-values of 0.13.

External facade using Terrix brick-slip system

Terrix brick slips quick and efficient application, has contributed to the reduced build time of this eco efficient housing development.

Brick slips, which benefit from its lightweight, recyclable and durable material, contribute towards the development's EPC A classification whilst maintaining a high standard in fire safety.

Benny Griffiths, Valleys to Coast commented:

"The speed in which this development has progressed is very impressive. With Valleys to Coast's focus to complete 1,000 new affordable homes in Bridgend by 2031, our team are always delighted when we get to see projects like this gaining momentum towards completion – especially when they are built so quickly and efficiently"

Terrix Brick slip breathable system.

Reduced programme & commercial costs on foundations & frame. No cavity required for SFS or timber frame

Terrix[®] brick slips are significantly lighter with a quicker application process to clay slips and require a no cavity design so they can be used on almost any facade without the need for additional reinforcement or foundation.

Fire classification A1 or A2-s2,d0

Non organic means no spread of flame

Long lasting colour

No flashing - minimal long term maintenance

Chemical bond means no delamination

No water penetration

Vapour permeable (fully breathable)

Bespoke design and sizes

Frost resistant

Black mould and algae resistant
